

About Navic

Navic is a skill-swap platform where people exchange knowledge instead of money — *"no money involved, just knowledge."* Every user is both teacher and learner, connected by a credit economy, scheduling, and direct chat. It's a fully working product demo (auth, marketplace, credits, schedule, chat, notifications, settings) in one animated, dark-mode-ready web app.

CORE FLOWS

Problem

- Learning is expensive and often solitary.
- Expertise is underused — no safe channel to share it.
- Skill-barter lacks structure, matching and trust.

Solution

- A reciprocal credit economy: earn by teaching.
- Structured matching, scheduling & messaging.
- A warm, human UI that feels like connecting, not studying.

Design thesis

Skill exchange happens between peers, so the product should feel like a **conversation, not a transaction** — expressed through conversational copy, a hand-drawn mascot, generous rounded surfaces and soft ambient colour.

navic — "Share what you know and learn what you love."

Design Championship 2026 · Product & UI/UX Documentation

The Navic Journey

Six interlocking steps trace the complete skill-swap loop — designed in the classic interlocking-timeline format.

Tech Stack

What the platform is built with.

Built with

Navic is built with React + Vite, Tailwind CSS, Framer Motion & GSAP, and sonner — all hosted on Vercel.
